

# Call-for-participation

The g-Eclipse project wants to demonstrate the benefit of the emerging g-Eclipse framework for new emerging Grid users. Therefore the g-Eclipse project has reserved resources for the implementation of plug-ins for an industry relevant application. This "first industrial adopter" will bring in an industry relevant application that requires an OGSA-compliant middleware. Together with the current g-Eclipse consortium, support for the new middleware will be provided within the g-Eclipse framework during the second project year to enable the "gridification" and customisation of the new application.

## Requirements for the new partner:

The g-Eclipse project is looking for a new project partner fulfilling the following requirements:

- You are a company situated in a European Union member state or an associated country.
- You already have an application and you want to migrate this application to a Grid infrastructure with the help of the g-Eclipse platform. The porting to the Grid would benefit you and your application as well as the g-Eclipse project.
- You are willing to work closely with the g-Eclipse consortium and can offer the needed manpower.

## Benefit for the new partner:

The g-Eclipse consortium has reserved resources at the beginning of the project for the "first industrial adopter". The following resources are available for the new project partner:

- 7 person months (PM) for implementation and adaptation of the new Grid application
- 2 person months (PM) for dissemination and exploitation activities and presenting the results of the joint effort as a part of the g-Eclipse dissemination activity.
- These 9 PM correspond to a budget of approximately 50000 EUR contribution from the EC. These resources have to be used according to the financial rules of the EC's 6th Framework Programme.

## Applications and Deadlines

If your company is interested in collaboration with the g-Eclipse consortium to enable your application to run on the Grid, please send your informal application to the following email address: [call-for-participation@geclipse.eu](mailto:call-for-participation@geclipse.eu).

Your application email should include

1. your contact address
2. a short description of your application
3. a description of the OGSA compliant Grid middleware you want to use

If you need more information, feel free to send your questions to the same email address or contact the Project Coordinator H. Kornmayer directly. You can reach him at

Dr. Harald Kornmayer  
 Institute for Scientific Computing
