

LINC member, Nicholas Loulloudes participated in the 'Heidelberg Laureate Forum' [HLF 2013](#), hosted in Heidelberg, Germany, on 22-27 of September, 2013.

The Heidelberg Laureate Forum aims to unite the highly talented mathematicians and computer scientists of our day. As the HLF foundation believes that communication is a key factor in the process of achieving scientific success and excellence, the HLF strongly supports the interaction, exchange and communication amongst researchers throughout all states of their careers.

The forum provided the opportunity to a number of selected international young researchers to meet Abel, Fields and Turing Laureates in a conference week full of inspiration and opportunities.
